Tables and pictograms

Recap

In a pictogram, each picture represents one or more items.

 = 2 people

Revise

Look at this pictogram.

Dogs entered for a local dog show

 = 2 dogs

Irish setter	       
Labrador	            
Boxer	        
Great Dane	 
Border collie	           
Corgi	      
Bloodhound	  

- The title tells you what the data is about.
- This pictogram shows the number of dogs of different breeds that were entered in a local dog show.
- Look at the key. This tells you that one picture represents two dogs.
- Count in 2s to find the number of each breed of dog.

Look at the pictures for Irish setter.

There are 2, 4, 6, 8, 10, 12, 14 and then a half picture.

Half a picture represents one dog.

So there are 15 Irish setters.

Tips 

If you are asked to collect your own data use tallies. Count the tallies when you have collected all the data.

When making a pictogram make sure that the pictures are spaced evenly so that they can be compared easily across the pictogram.

Always read the key so you know what each picture represents.

Talk maths

Look at these questions about the pictogram shown on the page opposite. Explain the answers to a friend or adult.

Which breed of dogs has the least number entered?

How many more Irish setters are there than corgis?

Make up some questions of your own about the pictogram.

If you get stuck, look at the Key again.

✓ check

The table shows the number of cats of different breeds that were entered in a local cat show.

- 1. Use the data to make a pictogram. Give it a title. Choose a picture to represent two cats.**

Then answer the questions.

- a.** How many cats are there if you total the munchkin, Russian Blue and British shorthair cats?

- b.** Which breed has the least number of cats?

- c.** Which breed has the greatest number of cats?

Cat breed	Numbers
Siamese	15
Ragdoll	18
Russian blue	11
British shorthair	20
Persian	13
Munchkin	10

Siamese									
Ragdoll									
Russian blue									
British shorthair									
Persian									
Munchkin									

! Problems

Brain-teaser How many more Siamese need to be entered so that there is the same number as the British shorthair cats?
